Overview

What is an energy storage device?

Modern power electronics-based energy storage devices can be controlled to act as current or voltage generators having an energy storage media able to provide active power for a certain amount of time when needed. Depending on the application, they can be connected in parallel or in series with the electric power system.

Can electrical energy storage solve the supply-demand balance problem?

As fossil fuel generation is progressively replaced with intermittent and less predictable renewable energy generation to decarbonize the power system, Electrical energy storage (EES) technologies are increasingly required to address the supply-demand balance challenge over a wide range of timescales.

What are power electronics-based energy storage devices?

Power electronics-based energy storage devices are among the fastest growing technologies for solving power quality problems, providing ancillary services, and supporting the development and access to affordable clean energy for a wide range of segments and applications.

What is electrical energy storage (EES)?

Electrical Energy Storage, EES, is one of the key technologies in the areas covered by the IEC. EES techniques have shown unique capabilities in coping with some critical characteristics of electricity, for example hourly variations in demand and price.

How can power electronics-based energy storage devices serve as peak shaving assets?

Power electronics-based energy storage devices are ideally suited to serve as peak shaving assets as they can supply and absorb active power in real time

when needed, supplying the peaks of a varying load and removing the need of bringing online a new generating source to cover the short-term demand.

Is SNG a viable storage system?

2 and SNG storage systems are available and in some cases have been used in industrial applications for de-cades. However, such storage systems become vi-able and economically reasonable only if the grids have to carry and distribute large amounts of vol-atile electricity from REs.
