#### **Overview**

Parallel to the fast uptake of renewable energy sources (RESs) connected to the grid, the electric power industry has experienced a number of issues related to system strength and inertia. Battery energy stora.

How to plan battery energy storage systems under weak grid condition?

Planning battery energy storage systems (BESS) under weak grid condition requires a thorough analysis; The location and sizing of the BESS was modelled as a constraint optimization problem. The optimization problem was solved using a heuristic approach called Binary Grey Wolf Optimization.

Do battery energy storage systems mitigate voltage and frequency stability problems?

Battery energy storage systems (BESSs) have been proved effective in mitigating numerous stability problems related to the high penetration of renewable energy sources. This paper investigates the role of BESSs in mitigating the voltage and frequency stability issues in weak grids.

Can Utility-scale battery energy storage systems be used in weak grids?

Optimal allocation of utility-scale battery energy storage systems (BESS) in weak grids is presented. Short circuit analysis is performed to narrow down the search space of potentially suitable buses for BESS installation. System reliability and transient voltage and frequency stability are improved.

How can a battery energy storage system improve system reliability?

A promising solution to these challenges is the strategic deployment of battery energy storage systems (BESS). The BESS can support improving system voltage and frequency stability and increase system reliability because it can rapidly charge and discharge the grid when needed.

Are battery energy storage systems a viable solution for the grid?

Innovative solutions and strategies are needed to sustain the grid's reliability with the rapid and continuous growth of renewable DGs. Employing battery

energy storage systems (BESS) in the grid is emerging as a highly effective solution since they can rapidly charge and discharge the grid when needed [, , , ].
