**Can a 72 volt inverter be used  
with a 60 volt one**

## Overview

---

Can a 72 volt battery be used across voltage?

They can't be used across voltage. 72 volt batteries are composed of six batteries connected in series, while 60 volt batteries only have five batteries connected in series. The charging process of chargers is accomplished by controlling current or charging voltage. Each stage is different and the voltage varies, which may lead to a movie.

How much power does an inverter use?

An inverter uses a small amount of energy during the conversion process. The difference between the input power and the output power is expressed in percentages. The efficiency of modern inverters is more than 92 %. This means that a maximum of 8 % of the power consumption is used to convert battery voltage to 230V/50Hz.

How much power does a 12 volt inverter use?

There is a simple method to calculate how much power your inverter is using: For 12-volt inverters, divide the connected load by 10; for 24-volt inverters, divide by 20. Example: How much does an inverter consume with a 400 W load connected?

For a 12 V inverter such as a Mass Sine 12/1200, consumption will be  $400/10 = \text{approx. } 40 \text{ amps}$ .

What are the downsides of 72 volts?

My specific question is what are the downsides of going all the way to 72 volts instead of 60 volts per my original plan?

Assuming everything can handle both voltages, and assuming that phase current is the limiting factor on power, the only difference will be a higher top speed at 72 volts, but slightly less efficiency.

How much battery does a 24 volt inverter use?

For 24-volt inverters, it is 10 %. The battery capacity for a 12-volt Mass Sine 12/1200, for instance, is 240 Ah, while a 24-volt Mass Sine 24/1500 inverter would require at least 150 Ah. The indicated battery capacity is only for the inverter. The capacity required for other loads should be added to it. How much power does an inverter consume?

.

Is 72V ecosystem better than 60V?

72v ecosystem is better for going above 2500w. Is it easier to get chargers and BMS for 60V or 72V applications?

The only ones I can see at a glance seem to be the generic ones. BMSes are fairly easy. The problem is the selection of chargers once you get above 50.4v/14S. This is a big reason that i like making power with more amps and less volts.
