## Democratic Republic of Congo Energy Storage Frequency Regulation Project

#### **Overview**

What is the electricity access rate in the Democratic Republic of Congo?

The public version of the resulting report of the effort is available here. The Democratic Republic of Congo's national electric-ity access rate is estimated at 19%. Less than 1% of the rural population and 41% of the urban population has energy access. Of the country's 10 million house-holds, only 1.6 million have have access to electricity.

What are the barriers to power supply in DRC?

Key barriers to the provision of appropriate power in DRC include heavy reliance on hydropower generation, of which less than 50% is currently available for generation due to aging infrastructure and lack of maintenance, and the underdeveloped power grid which only covers the southern and the eastern region.

How will the DRC meet the ELEC-Tricity challenge?

The DRC aims to connect 32% of the country to elec-tricity by 2030. Meeting this challenge will require co-ordinated efforts from various stakeholders, support-ive policies and regulations, and technical assistance support to prospective projects in order to attract in-vestments.

How will a green mini-grid impact the DRC?

Successful implementation is expected to spur future development of private sector green mini-grids that not only address the country's clean energy targets but also reduce the country's GHG emissions from the energy sector by displacing diesel-based generation across the DRC. CCIA.

How much e-waste does the DRC produce?

The DRC is expected to produce 16,050 tons of elec-trical and electronic waste, according to a study car-ried out by the Belgian group, Groupe One. There are currently no regulations or legislative frameworks concerning e-

waste.

Is there an interconnected national power transmission network in the DRC?

There is no interconnected national power transmis-sion network in the DRC, which is instead structured into three independent interprovincial grids. The western and southern grids are connected by a High Voltage Direct Current (HVDC) line. The eastern grid is more remote and will not be be connected.
