Dili Distributed Energy Storage Operation

Overview

What is a storage capacity optimization problem?

This problem encompasses optimizing storage capacities across all locations, with the objective of minimizing the total storage investment and energy generation costs.

How do we analyze storage investment decisions using dynamic programming?

Using dynamic programming, we optimize storage operations and derive value function properties that are key to analyzing the storage investment decisions. We discern fundamental differences between centralization/localization decisions at the capacity investment stage and the centralization/localization decisions at the storage operations level.

Is centrally stored energy a better option for inventory pooling?

Operationally, centrally stored energy offers more flexibility, which is consistent with the conventional understanding of inventory pooling. However, we find that localized storage often emerges as the preferred option at the investment stage under various circumstances.
