Flywheel Energy Storage Uninterruptible Power Supply

Overview

Designed to provide high-power output and energy storage in a compact, self-contained package, POWER THRU flywheel products are a long-lasting, low-maintenance, lightweight, and environmentally-sound alternative to flooded and valve regulated lead-acid (VRLA) batteries in uninterruptible power supply (UPS) systems. What is a direct current flywheel energy storage system?

Advances in power electronics, magnetic bearings, and flywheel materials coupled with innovative integration of components have resulted in direct current (DC) flywheel energy storage systems that can be used as a substitute or supplement to batteries in uninterruptible power supply (UPS) systems.

What is a magnetically suspended flywheel energy storage system (MS-fess)?

The magnetically suspended flywheel energy storage system (MS-FESS) is an energy storage equipment that accomplishes the bidirectional transfer between electric energy and kinetic energy, and it is widely used as the power conversion unit in the uninterrupted power supply (UPS) system.

What is a flywheel energy storage system?

A flywheel energy storage system is a type of energy storage system that functions as an uninterruptible power supply (UPS) from the ecological energy storage perspective. However, in high-speed rotating machines, such as motors, generators, and flywheels, windage losses can amount to a significant ratio of the total losses.

Can flywheel energy storage be used in ups?

Coupled with seemingly ever-increasing needs for more reliable, higher quality power, the long-run prospects for flywheel energy storage in UPS applications looks good. Manufacturers of flywheels for application in UPS systems were primarily identified via searching Internet web sites. This search was conducted during fall 2002.

What is a power Thu flywheel?

Designed to provide high-power output and energy storage in a compact, self-contained package, POWER THRU flywheel products are a long-lasting, low-maintenance, lightweight, and environmentally-sound alternative to flooded and valve regulated lead-acid (VRLA) batteries in uninterruptible power supply (UPS) systems.

Can a flywheel replace a battery in a UPS system?

Flywheels appear poised to replace or supplement batteries as a backup power supply in UPS systems. Six companies currently offer DC flywheel energy storage products. Another half dozen or so are developing products they expect to bring to market within the next few years.
