# Hidden costs of inverter photovoltaics

#### **Overview**

Why is solar photovoltaic technology so expensive?

Since the early 2000s, the total cost of solar photovoltaic (PV) technology has consistently sunk below expert expectations, mostly due to hardware improvements.

How does technology affect the cost of solar PV systems?

The findings show that advances in hardware features made the largest contribution to the overall cost reduction of solar PVs. The reduction in the soft costs has also been primarily driven by hardware improvements: more practical system designs might speed up installation, reducing labour or permit costs.

Do solar PV installations have soft costs?

Yet, soft costs — the non-hardware expenses for solar PV installations, such as connection and permit fees — have represented a growing share of total costs, even as solar PVs have become more widespread and affordable. The mechanisms underlying the changes in soft costs over time remain not fully understood.

How do hardware features affect solar PV costs?

Trancik and team then populated the equations with historical inflationadjusted data to characterize the features leading to the change in costs for residential and utility-scale solar PV installations. The findings show that advances in hardware features made the largest contribution to the overall cost reduction of solar PVs.

How does a cost-change model affect solar PV installation costs?

The equations in the cost-change model provide a framework to account for the multi-faceted impact of different variables on overall system costs. Trancik and team then populated the equations with historical inflation-adjusted data

to characterize the features leading to the change in costs for residential and utility-scale solar PV installations.

Do hardware and non-hardware features reduce the cost of solar photovoltaics?

The cost of solar photovoltaics has declined over the past two decades, but the driving mechanisms are not fully understood. Now, researchers examine the role of hardware and non-hardware features in cost reduction of photovoltaics and develop a model that could be used to understand cost reductions for other energy technologies.
