Overview

Battery Energy Storage Solutions (BESS) provide hospitals and medical facilities with a secure, efficient, and sustainable energy source, ensuring uninterrupted power supply for essential equipment and operations. Are battery energy storage systems generating new revenue streams for the health sector?

New revenue streams for the health sector from battery energy storage systems. The ambitious target of reaching net-zero greenhouse gas emissions by 2050 in the UK, which includes the decarbonisation of heat and electricity, means the increase of instantaneous power from non-dispatchable renewable energy sources (RESs).

Can a battery energy storage system provide flexibility to the grid?

Battery energy storage systems (BESS) can match loads with generation and can provide flexibility to the grid. This study is proposing the health sector as a new flexibility services provider for the grid through BESS. The health sector has large loads that run throughout the year, and by managing this load it can provide flexibility to the grid.

Why is intermittency a problem in a battery energy storage system?

The intermittency of RESs will cause stability issues for the grid resulting from the mismatch between generation from RES and load demand. Battery energy storage systems (BESS) can match loads with generation and can provide flexibility to the grid.

Can a battery be used in hospitals for grid services?

As can be seen, there are limited discussions addressing the use of the battery in hospitals for grid services. The nearest research to this application is , which was not specific to hospitals or the health sector, and the hospital was one of three facilities included in μG , which also included a school and governmental public office.

What are batteries used for?

Batteries are frequently found within the health sector as part of the electrical power system in hospitals, and they are mainly employed for two kinds of applications: hybrid systems and resilience. A BESS within a hybrid electrical systems are used for load and generation management, cost management, and CO2 reduction.

Should RES be integrated with flow batteries?

The integration of RES with flow batteries is considered to replace backup combustion generators that are used to provide emergency power, to enhance the security of supply, and to convert hospitals from energy sinks to healthy and reliable energy resources.
