# How big a capacitor should a 5g base station use

#### **Overview**

Are Murata capacitors suitable for 5G applications?

To help meet the demands of 5G applications, Murata ofers a range high-Q, high temperature capacitors in small package sizes. Murata has a range of large capacitance/125°C suitable for applications requiring a high-temperature warranty.

How do engineers design 5G base stations?

Engineers designing 5G base stations must contend with energy use, weight, size, and heat, which impact design decisions. 5G New Radio (NR) uses Multi-User massive-MIMO (MU-MIMO), Integrated Access and Backhaul (IAB), and beamforming with millimeter wave (mmWave) spectrum up to 71 GHz.

Can a 5G base station withstand high humidity?

Base stations located in more tropical or humid climates should be engineered to withstand high levels of humidity and still maintain their performance and lifespan. Both the 5G cells and the base station should remain functional even when subjected to severely wet and humid conditions.

How can a 5G base station be truly global?

To develop truly global 5G coverage, base stations will need to be installed across the world in some extremely inhospitable environments. This means that the new generation of base stations needs to be designed with environmental challenges and extreme weather in mind, such as the efects of humidity, heat and wind.

What frequency bands will 5G support?

5G is targeting two frequency bands: sub-6 GHz and mmWave and it is expected that sub-6 GHz bands will be the backbone 5G infrastructure. For the mmWave and sub-6 GHz range with channel bandwidths of up to 100 MHz, components designed to support 4G infrastructure will be placed under higher

demands.

How will mmimo affect 5G scalability?

As discussed earlier, small 5G cells will need to be integrated high up the mast in a modular fashion to allow for improved scalability, while the shift to mMIMO and techniques such as beamforming – using a range of antennae to control the direction of a signal beam – will add another layer of complexity to the process.
