How to increase the battery cabinet

Overview

How do you increase battery capacity?

Adding more battery modules: increasing energy capacity by adding more cells by installing additional battery packs. Upgrading battery packs: replacing whole battery packs with better performing or cheaper technology, either lithium-ion or new chemistries such as sodium-ion.

Why do batteries need augmentation?

Augmentation also helps to manage degradation (also known as repowering). Battery energy storage systems can lose up to 5% of their available energy capacity through degradation within the first year of operation and 40% after 15 years. Degradation is mainly linked to cycling.

What does doubling a battery energy storage system mean?

For battery energy storage systems, this means increasing the battery's energy capacity. This could be repowering a system following degradation or a commercial decision to increase the project's duration. Doubling a battery's energy capacity via duration could boost revenues by 37% today but up to 88% over its lifetime.

Why do battery energy storage systems lose a lot of energy?

Battery energy storage systems can lose up to 5% of their available energy capacity through degradation within the first year of operation and 40% after 15 years. Degradation is mainly linked to cycling. The transition to higher energy services means batteries are cycling more, causing them to degrade more quickly.

What is battery augmentation?

As mentioned, augmentation is the process of increasing a battery's energy capacity. This could be to restore it to its original capacity following a reduction due to degradation or to increase it beyond its original capacity. In

both cases, decisions to augment a battery are made to improve its revenuegenerating potential.

How do batteries work in a power conversion system?

Batteries operate in DC. On-site power conversion systems (PCS), such as inverters, convert the electricity from batteries to AC and ensure compatibility with the grid. AC augmentation connects new batteries after the existing inverter (the AC side of the system).
