#### **Overview**

What is a safe temperature for a lithium-ion battery?

While those are safe ambient air temperatures, the internal temperature of a lithium-ion battery is safe at ranges from -4°F (-20°C) to 140°F (60°C). So if you want to learn all about the safe ranges of temperatures for lithium-ion batteries, then this article is for you. Let's get right into it! Playing While Charging Phone: Damages Battery?

.

Can high-temperature lithium-ion batteries withstand extreme temperatures?

High-temperature polymer lithium-ion batteries can withstand temperatures up to 800°C in certain tests. However, in daily life, such extreme temperatures are rarely encountered. Instead, we often see battery damage due to overcharging or excessive use of electronic devices.

What temperature does a polymer lithium ion battery operate at?

Polymer lithium-ion batteries generally operate within a temperature range of -20°C to 70°C. Excessive temperatures can affect their capacity, reducing discharge capacity. Additionally, the chemical structure of the battery's internal materials may deteriorate, significantly impacting its lifespan.

What happens if you charge a lithium battery at high temperatures?

Charging lithium batteries at extreme temperatures can harm their health and performance. At low temperatures, charging efficiency decreases, leading to slower charging times and reduced capacity. High temperatures during charging can cause the battery to overheat, leading to thermal runaway and safety hazards.

How does temperature affect the stability of a lithium-ion battery?

The temperature of the environment in which the battery is located, as well as

the charging and discharging methods of lithium-ion batteries, can all affect the stability of the battery cell. We will discuss these factors in detail later, but first let's understand the ideal temperature for the use and storage of lithiumion batteries.

How to ensure stable operation of lithium-ion battery under high ambient temperature?

To ensure the stable operation of lithium-ion battery under high ambient temperature with high discharge rate and long operating cycles, the phase change material (PCM) cooling with advantage in latent heat absorption and liquid cooling with advantage in heat removal are utilized and coupling optimized in this work.
