Maintenance experience of battery energy storage system for communication base stations

Overview

Why do telecom base stations need a battery management system?

As the backbone of modern communications, telecom base stations demand a highly reliable and efficient power backup system. The application of Battery Management Systems in telecom backup batteries is a game-changing innovation that enhances safety, extends battery lifespan, improves operational efficiency, and ensures regulatory compliance.

What is a battery energy storage system (BESS)?

With the rapid development of renewable energy, Battery Energy Storage Systems (BESS) are widely used in power, industrial, and residential sectors. Regular maintenance is essential to ensure the safety, efficiency, and longevity of battery energy storage systems.

Why do telecom base stations need backup batteries?

Backup batteries ensure that telecom base stations remain operational even during extended power outages. With increasing demand for reliable data connectivity and the critical nature of emergency communications, maintaining battery health is essential.

Why should battery energy storage systems be maintained?

Battery energy storage systems can be affected by various factors during everyday use, such as ambient temperature, load changes, and battery aging. Regular maintenance helps detect potential issues, prevents sudden system failures, and ensures long-term stable operation.

What are the guidelines for battery management systems in energy storage applications?

Guidelines under development include IEEE P2686 "Recommended Practice for Battery Management Systems in Energy Storage Applications" (set for balloting in 2022). This recommended practice includes information on the

design, installation, and configuration of battery management systems (BMSs) in stationary applications.

Why do power stations need backup batteries?

These stations depend on backup battery systems to maintain network availability during power disruptions. Backup batteries not only safeguard critical communications infrastructure but also support essential services such as emergency response, mobile connectivity, and data transmission.
