Malta Energy Storage Power Generation

Overview

Whether integrated with energy-intensive industries, generation assets, or deployed as a standalone system, Malta's Steam Energy Management and Storage (SEMS) fully replaces the attributes of fossil-fired energy, delivering identical synchronous generation for grid reliability without emissions. Why is Malta a good place to store electricity?

By efficiently storing electricity for long durations, Malta's system can enable increased penetration of renewable energy from intermittent sources, maintain grid reliability, and accelerate the decarbonization of the energy sector.

What is the Malta PHES energy storage system?

The Malta PHES energy storage system is built upon well-established principles in thermodynamics and uses conventional components that have been present in power plants for hundreds of years. Electricity from the grid is used to heat molten salt and cool a chilled liquid. In these forms, energy can be efficiently stored for long durations.

Does Malta have a long-duration energy storage solution?

Malta has developed a long-duration energy storage solution that leverages steam-based heat pump technology to provide a cost-efficient, flexible, and integration-ready option for utility and industrial clients.

What is Malta's electro-thermal energy storage system?

Malta's electro-thermal energy storage system is built upon well-established principles in thermodynamics. Malta's electro-thermal energy storage system is built with abundant, field-proven components that are fully recyclable and reclaimable. Molten salt is the most mature technology used in thermal storage.

What is energy in Malta?

Energy in Malta describes energy production, consumption and import in Malta. Malta has no domestic resource of fossil fuels and no gas distribution network, and relies overwhelmingly on imports of fossil fuels and electricity to cover its energy needs.

How many electricity plants are there in Malta?

Malta has four electricity plants operational and the total combined nominal installed capacity is 537.8 MW. The Malta-Sicily Interconnector, which has been in operation since April 2015, allows for an electricity link between the Maltese Islands and the Italian electricity market has bidirectional flow capacity of 200 MW.
