Malta grid-connected wind power generation system

Overview

Why is Malta connected to the European power grid?

Since 2015, the Malta-Sicily interconnector allows Malta to be connected to the European power grid and import a significant share of its electricity. At 4.9%, Malta had the lowest share of renewables as part of gross inland energy consumption in the EU in 2017.

Do I need a grid study with Enemalta?

Applications for generators connected to the grid which will not benefit from a Feed-in Tariff scheme, e.g. a cogeneration plant (CHP) or a PV intended only for own consumption, shall carry a grid study with Enemalta Plc before applying at REWS. Actual grid allocation will be affected once you enter into an agreement with Enemalta.

What is a wind power research project?

It collects recent studies in the area, focusing on numerous issues including unbalanced grid voltages, low-voltage ride-through and voltage stability of the grid. It also explores the impact of the emerging technologies of wind turbines and power converters in the integration of wind power systems in power systems.

How do I connect a res to the national electricity grid?

If you are interested in connecting a RES to the national electricity grid, you would need to request the approval of the REWS. The application forms and additional details are available here.

How do I apply to Enemalta?

Once the REWS approves your application, you will be guided to apply at Enemalta via email on resconsult.em@enemalta.com.mt with the "Details to DSO" document issued by REWS. Enemalta will then provide necessary feedback and/or the No Objection document within the timeframes specified in

the Process Guide above.
