# Medium-sized solar photovoltaic system

#### **Overview**

Mid-scale PV systems are defined as having a capacity range of greater than 100 kilowatts (kW) and less than or equal to 30 MW.What is a mid-scale solar PV system?

This report contains projections by Jacobs for the Clean Energy Regulator (CER) of the capacity and number of mid-scale solar photovoltaic (PV) installations for the calendar years 2024 up to and including 2030. Mid-scale PV systems are defined as having a capacity range of greater than 100 kilowatts (kW) and less than or equal to 30 MW.

What is a solar PV system?

These solar PV plants are considered utility scale or community projects, ground-mounted and, in most cases, directly connected to a high-voltage distribution or sub-transmission network. For PV systems with capacity less than 5 MW, the connection process to the grid is less time-consuming and less costly.

What is the average size of a solar PV plant?

According to the CER data, the average size of the solar PV plants at the water treatment sites is 1.65 MW, although this is skewed by the two largest plants. Excluding these reduces the average size to 989 kW.

What is a solar power system?

Compatible with PV, wind, and thermal power systems, thereby facilitating renewable energy utilization, power output smoothing, peak shifting, frequency regulation and peak load leveling, and also providing auxiliary services to the power grid. It is widely used in power generation, transmission, distribution, and utilization.

How many retail outlets are suitable for a mid-scale solar PV system?

Chain outlets. This gave a total of 1,786 retail premises considered suitable for

the installation of a mid-scale PV system. Jacobs used several sources to piece together the market share and uptake of solar PV systems at water treatment facilities in Australia.

What are the top 5 sectors installing mid-scale solar PV?

The top five sectors installing mid-scale solar PV are: electricity supply, commercial, retail, logistics and education. Number of new installations was 236. Installed capacity was 243 MW. Installed capacity per site was 1.0 MW.
