Myanmar Energy Storage Product Production

Overview

What is the energy demand supply situation in Myanmar?

The Myanmar energy demand supply situation indicates that power generation mix must shift to more coal and hydropower, continued use of biomass, natural gas consumption, and appropriate increase of renewable energy such as solar PV and wind power generation.

What natural resources are found in Myanmar?

Myanmar is endowed with rich natural resources used for the production of commercial energy. The current available sources of energy found in Myanmar are crude oil, natural gas, hydroelectricity, biomass, and coal. Besides these, wind, solar, geothermal, bioethanol, biodiesel, and biogas are the potential energy sources found in Myanmar.

What is Myanmar's indigenous energy production?

In addition to crude oil, Myanmar indigenous production also includes coal, gas, hydro, biomass, and other renewables (solar and wind). Compared with energy imports, Myanmar's total indigenous energy production grew more slowly at an average rate of 5.1% per year.

How to estimate the total energy consumption of Myanmar industries?

At the national level, this will also need the total production of the sub-sector to estimate its energy consumption. In conclusion, the national production or gross value added of the sub-sectors is very important in estimating the total energy consumption of Myanmar industries. The parking lot survey was conducted in several areas of Yangon.

Does Myanmar export electricity?

GWh = gigawatt-hour, RE = renewable energy. Source: MOEE (2018). Since 2013, Myanmar has exported electricity to neighbouring countries such as Thailand and China. The exported electricity all comes from hydroelectric

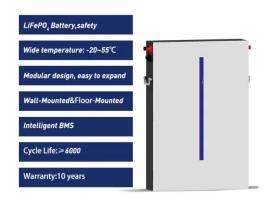

plants. Table 1.24. Electricity Export Source: MOEE (2018). MOEE data covers electricity sales to final users in Myanmar.

What energy sources are found in Myanmar?

Besides these, wind, solar, geothermal, bioethanol, biodiesel, and biogas are the potential energy sources found in Myanmar. Myanmar's proven energy reserves in 2017 comprised of 94 million barrels of oil, 4.552 trillion cubic feet of gas, and over 500 million metric tons of coal.
