Onsite Energy Outdoor Solar Energy without Electricity or Grid

Overview

Are on-site and off-site energy systems a good investment?

Many benefits exist for both on- and off-site systems. On-site systems offer a better return on investment because financial savings are across the entire electricity supply chain – costs associated with energy generation, transmission and distribution, market volatility, and environmental costs.

Do off-site solar and wind projects work everywhere?

They also don't work everywhere as solar and wind resource varies from location to location, as well as incentives and rebates. Large energy consumers are increasingly looking to procure their renewable energy from off-site projects.

Do on-site solar systems work everywhere?

However, many on-site systems simply can't scale large enough to cover full consumption needs, so they typically only cover a percentage of the facility's needs, relying on traditional electricity to cover the deficit. They also don't work everywhere as solar and wind resource varies from location to location, as well as incentives and rebates.

What are on-site renewables?

First, let's define each. On-site renewables, aka direct, are "behind the meter" systems at a specific location, providing energy on-demand or via on-site storage (i.e., batteries). These are typically financed, owned, and managed by the company themselves.

What is an off grid Solar System?

Off grid solar systems use clean, renewable energy, offering stability and sustainability. They're customizable, scaling from small RV setups to full-home solutions, and empower users to live anywhere without sacrificing modern comforts. An off grid solar energy system pairs perfectly with solar powered

refrigerators and solar powered fans.

How can on-site solar PV & energy storage improve sustainability?

To achieve sustainability goals while meeting the increasing electricity demands of electrification, organizations are pairing on-site solar PV generation with on-site energy storage. These systems, which are considered as "behind-the-meter" (BTM) systems, allow facilities to maximize the benefits of on-site renewable generation.
