# Photovoltaic outdoor on-site energy is there solar energy

#### **Overview**

These systems capture sunlight and convert it into electricity through the photovoltaic effect, where the PV cells within the solar panels generate a direct current (DC) that is then converted into alternating current (AC) by an inverter to be used by the electrical loads on site. How can on-site solar PV & energy storage improve sustainability?

To achieve sustainability goals while meeting the increasing electricity demands of electrification, organizations are pairing on-site solar PV generation with on-site energy storage. These systems, which are considered as "behind-the-meter" (BTM) systems, allow facilities to maximize the benefits of on-site renewable generation.

Is solar photovoltaic electricity a viable energy source?

The cost of solar photovoltaic electricity has been divided by 10 in the last 12 years, making it one of the most competitive energy sources in the world today. It is now possible to dispose one's own autonomous energy ecosystems that can continuously meet up to 100% of one's own electricity needs.

What is photovoltaic solar energy?

Photovoltaic solar energy meets the challenges of decarbonization, optimizing energy costs and increasing energy independence.

How can a solar power system save you money?

Use solar power to save you money and reduce your carbon footprint. The most common on-site renewable energy systems are solar-powered. Solar setups convert light energy from the sun into electrical current. They can be installed in sun-facing areas such as rooftops, external walls or parking lots.

Can on-site storage be used alongside solar PV?

If a utility restricts the exports from a facility to the grid, the use of on-site storage alongside solar PV can provide a solution to avoid costly infrastructure

upgrades, thus increasing the feasibility of larger on-site PV installations.

What are the benefits of an on-site solar PV system?

For the scenario represented in the graph, an on-site solar PV system allows the facility to reduce the amount of electricity drawn from the grid during the middle of the day. Increasing the amount of solar PV production on-site can provide additional cost and emission reductions and resiliency benefits for facilities.
