# Requirements for land transportation of lithium batteries

#### **Overview**

This guideline details terms and definitions, lithium battery classification, labeling and marking requirements for lithium battery dangerous goods, packaging requirements for lithium battery dangerous goods, safety requirements for lithium battery dangerous goods, packing safety requirements, testing institution requirements, transportation requirements, documentation requirements, and emergency responses. What are the regulations for lithium batteries?

International, national, and regional governments, as well as other authorities, have developed regulations for air, road, rail, and sea transportation of lithium batteries and the products that incorporate these batteries. The regulations govern conduct, actions, procedures, and arrangements.

When will lithium ion batteries be available for transport?

Lithium-ion cells and batteries must be offered for transport at a state of charge not exceeding 30% of their rated capacity. This becomes a mandatory requirement on 1 January 2026.

How many G of lithium batteries are required for transportation?

32 • For highway and rail transportation only: Cells that exceed 1 g, but do not exceed 5 g, and batteries that exceed 2 g, but do not exceed 25 g, the text marking "LITHIUM BATTERIES—FORBIDDEN FOR TRANSPORT ABOARD AIRCRAFT AND VESSEL" is required.

What is a lithium battery guide for shippers?

LITHIUM BATTERY GUIDE FOR SHIPPERS A Compliance Tool for All Modes of Transportation Revised October 2024 WWW.PHMSA.DOT.GOV 2 INTRODUCTION This compliance resource was prepared to assist a shipper to safely package lithium cells and batteries for transport by all modes of transportation according to the latest regulatory requirements.

Are lithium batteries safe to transport in 2025?

Transporting lithium batteries safely has become a global priority. You must understand the regulations governing this process in 2025 to prevent risks and ensure compliance. Over 40 air transport incidents involving lithium batteries have occurred since 1991, with 21 on passenger aircraft.

What is the preferred transport method for lithium batteries in Europe?

Road transportation in Europe is actually the preferred transport method for lithium batteries. Being geographically well connected through its road systems, Europe has an advantage of inexpensive road transportation that is less rigidly regulated compared to air and sea. Table 15. Multilateral agreements between European countries.
