#### **Overview**

What is a diesel rotary uninterruptible power supply system?

Diesel rotary uninterruptible power supply system (DRUPS) combines the functionality of a flywheel-powered UPS and a diesel generator Main components of DRUPS include is an energy storage device which stores the kinetic energy generated by rotation of the flywheel on high speed through the coupled MG Set.

What is a diesel rotary UPS system?

EURO-DIESEL's high performing NO-BREAK KS® is a Diesel Rotary UPS system that uses a kinetic energy accumulator as an energy storage device, instead of traditional large lead-acid battery cells.

How energy storage and non-fault side power grid regulated power flow?

In this mode, the power flow can be regulated by the energy storage or non-fault side power grid through the FESPS to ensure uninterrupted power supply. In addition, the energy storage and non-fault side power grid could jointly realize uninterrupted power supply for the load.

What is an uninterruptible power supply system (UPS)?

The Uninterruptible Power Supply system (UPS) is a necessity for companies, organisations, institutions or the government agencies requiring critical power protection for their daily operations.

How is the load supplied by the superior power grid?

The load is supplied by the superior power grid separately from 01:00 to 05:00. During the period from 06:00 to 08:00, the load is transferred by the power flow. Period of 09:00 and during the period 18:00–19:00, the load is jointly supplied by the renewable energy, energy storage or/and power flow transfer.

How can energy storage system reduce the cost of a transformer?

Concurrently, the energy storage system can be discharged at the peak of power consumption, thereby reducing the demand for peak power supply from the power grid, which in turn reduces the required capacity of the distribution transformer; thus, the investment cost for the transformer is minimized.
