# Solar panels for photovoltaic power generation for own use

#### **Overview**

What is solar photovoltaic (PV) power generation?

Solar photovoltaic (PV) power generation is the process of converting energy from the sun into electricity using solar panels. Solar panels, also called PV panels, are combined into arrays in a PV system. PV systems can also be installed in grid-connected or off-grid (stand-alone) configurations.

Should you choose solar energy for your home?

Before starting the process of powering your home with solar energy, homeowners should investigate their energy use and consider potential efficiency upgrades. Homeowners should be well aware of their total electricity usage, and consider low-cost and easy-to-implement efficiency measures before choosing solar.

Who owns a solar energy system?

The system can be on- or off-site and may be owned by utilities, a solar developer, non-profit entities, or multiple community members. Learn more about community and shared solar. If you lease a solar energy system, you are able to use the power it produces, but someone else—a third party—owns the PV system equipment.

What are grid-connected and off-grid PV systems?

Learn about grid-connected and off-grid PV system configurations and the basic components involved in each kind. Solar photovoltaic (PV) power generation is the process of converting energy from the sun into electricity using solar panels. Solar panels, also called PV panels, are combined into arrays in a PV system.

What is photovoltaic energy?

The term "photovoltaic" is made up of the words "photo", which comes from the Greek word "phos", meaning "light"; and "voltaic", which originated in the

field of electricity, as a tribute to the physicist Alessandro Volta, who invented the battery. Photovoltaic energy can therefore be defined as energy produced by light.

What are the advantages and disadvantages of solar PV power generation?

There are advantages and disadvantages to solar PV power generation. PV systems are most commonly in the grid-connected configuration because it is easier to design and typically less expensive compared to off-grid PV systems, which rely on batteries.
