The role of battery cabinets for wind turbines

Overview

Battery storage systems enhance wind energy reliability by managing energy discharge and retention effectively. This leads to better overall energy use and supports a steady power supply. How can wind energy be stored in a battery system?

The project aims to store wind energy from a wind turbine in a Lithium-Ion Battery to manage fluctuations in power demand and frequencies. The battery system is modeled using Simulink software to store up to 10 MW of energy from the wind power system.

Can a battery power a wind turbine?

Hybrid wind: GE tests a new wind turbine equipped with a battery for evening out fluctuations. This could make integrating intermittent renewable energy far easier, and lower the cost of wind power. Indeed, even relatively small batteries could double the amount of renewable energy the power grid can handle.

How does the battery system work?

The battery system, modelled using Simulink software, stores energy up to 10 MW from the wind power system. The stored energy can then be reused to satisfy load demand from the grid, especially when electricity generation is low.
