# UPS uninterruptible power supply initial discharge time

## Overview

---

What are uninterruptible power supply hours?

Uninterruptible Power Supply hours refer to the duration a UPS can sustain power to connected devices during an outage. This time can vary widely based on several factors, including battery capacity, load requirements, and the UPS's efficiency. Knowing how to calculate this can help you select the right UPS for your needs.

How do I calculate the runtime of an uninterruptible power supply (UPS)?

To calculate the runtime of a uninterruptible power supply (UPS) using the manufacturer's discharge curves, you will need to follow these steps:  
Determine the load on the UPS: The load is the amount of power that your devices are consuming. This is typically measured in watts.

How long does an uninterruptible power supply last?

The estimated run time is 20 minutes. By going through the above formula, you can get the approximate runtime of the uninterruptible power supply. Even though it is a simple formula, there are many factors to consider including the type of battery. For extending the runtime, the battery must be charged regularly.

What is an uninterruptible power supply (UPS)?

An uninterruptible power supply (UPS) is a device that provides a backup power source to critical equipment in the event of a power outage. It is important because it can prevent equipment from shutting down or suffering damage due to a loss of power.

How long will my ups last during a power outage?

Runtime depends on several factors including UPS capacity, battery specifications, and the power draw of connected equipment. Several critical factors determine how long your UPS will last during an outage: Runtime

varies significantly based on UPS size and load:.

How do I estimate ups runtime during a power outage?

Enter your UPS specifications and load details below to estimate runtime during a power outage. UPS runtime is the duration your UPS can power connected equipment during a power outage. Runtime depends on several factors including UPS capacity, battery specifications, and the power draw of connected equipment.
