Overview

How will energy storage affect New York's energy grid?

In June 2024, New York's Public Service Commission expanded the goal to 6,000 MW by 2030. Storage will increase the resilience and efficiency of New York's grid, which will be 100% carbon-free electricity by 2040. Additionally, energy storage can stabilize supply during peak electric usage and help keep critical systems online during an outage.

How much energy storage does New York have?

New York has awarded about \$200 million to support about 396 MW of operational energy storage assets and has more than 581 MW of additional storage "under contract with the State and moving towards commercial operation" as of April 1, the governor's office announcement said.

How much energy does New York need to decarbonize the grid?

New York needs 12 GW of short-duration storage by 2040 and 17 GW by 2050 to "decarbonize the grid in a cost-effective and reliable way," the road map said. Additionally, the road map noted New York will need more than 4 GW of 8-hour storage by 2035 and 6.8 GW by 2050.

Will New York deploy 6 GW of energy storage by 2030?

New York will deploy 6 GW of energy storage by 2030 under a framework approved Thursday by the New York Public Service Commission, the office of Gov. Kathy Hochul, D, said in a press announcement.

Should multi-day storage projects be included in future grid planning?

Comments submitted to the PSC by LDES technology developers Form Energy, Hydrostor and Plug Power cheered the recommendations, with Form Energy recommending multi-day storage projects be included in all future grid planning processes and Hydrostor advocating for projects greater than 100 MW.

Will New York double its energy storage goal in 2022?

Hochul announced plans in January 2022 to double New York's previous energy storage goal of 3 GW by 2030. The state released a draft road map in December 2022 showing how it would achieve its new target, including a centralized procurement mechanism to expedite solicitations and deployments.
