Uninterrupted power supply for communication base stations is preferentially set

Overview

Can a remote base station power supply be uninterrupted?

By Zhang Hongguan & Zhang Yufeng Uninterrupted power supply for remote base stations has been a challenge since the founding of the wireless industry, but alternative sources have a chance of succeeding where traditional solutions have failed.

Do telecommunication towers contain Base Transceiver Stations (BTS)?

Abstract: Telecommunication towers for cell phone services contain Base Transceiver Stations (BTS). As the BTS systems require an uninterrupted supply of power, owing to their operational criticality, the demand for alternate power sources has increased in regions with unreliable and intermittent utility power.

How many power supply combinations are there in a base station?

For base stations, there are six power supply combinations-solar-only, solar+diesel, solar+mains, etc. Solar-only When there is sufficient sunlight, photovoltaic cells convert solar energy into electric power. Loads are powered by solar energy controllers, which also charge the batteries.

Can off-the-grid energy solutions help remote base stations?

Uninterrupted power supply for remote base stations has been a challenge since the founding of the wireless industry, but alternative sources have a chance of succeeding where traditional solutions have failed. With users no longer tolerating spotty coverage in the great outdoors, the need for off-the-grid energy solutions is ever growing.

What is onsite power supply?

Dual power Traditionally, when power outages are frequent, onsite power supply combines mains, batteries and generators. Normally, the mains supply power while charging the batteries. When the mains fail, batteries take over;

diesel generators are only utilized if the batteries prove insufficient.

What happens if a base station doesn't get enough sunlight?

When sunlight is not sufficient, the batteries will take over. Considering that remote base stations must be highly-integrated, inexpensive, and modest, Huawei has developed its all-on-pole EasySite solution, which integrates the base station, antennas, transmission, and tower into one convenient package.
