# Victoria Battery Energy Storage Station Planning

### **Overview**

A 1.8 GWh battery energy storage system proposed for Victoria's northeast is one of two new renewable energy projects set to be fast tracked through the state's accelerated planning approval pathway. Will Victorian Government approve a battery energy storage system?

The Victorian government has fast tracked the approval of what is to be one of the state's biggest battery energy storage systems as it seeks to accelerate the development of projects to support its renewable energy ambitions.

Will Trina Solar build a battery energy storage system in Victoria?

Trina Solar has submitted a planning application for a major battery energy storage system (BESS) in Victoria, Australia. The proposed Kiewa Valley BESS will have a capacity of 500 MW and 1 GWh, capable of dispatching power for up to two hours.

Will Victoria achieve a large-scale energy storage system by 2035?

Victoria aims to achieve 2.6 GW of large-scale energy storage by 2030 and 6.3 GW by 2035 as part of its clean energy transition. Trina Solar has submitted a planning application for a major battery energy storage system (BESS) in Victoria, Australia.

What is Victoria's largest battery energy storage system?

The \$350 million (USD 224.4 million) project, being developed near the town of Little River about 45 kilometres southwest of Melbourne, will be one of the state's largest battery energy storage systems if it goes ahead and will "support Victoria's clean energy transition.".

How many energy storage projects are there in western Victoria?

In March 2018, 2 projects in Western Victoria were chosen to be part of The Energy Storage Initiative – one in Ballarat and one in Gannawarra. Construction for the Ballarat and Gannawarra Energy Storage Systems was

completed in late 2018. Both batteries began operating over the summer of 2018 and 2019.

Could Victorian energy storage projects help achieve energy storage goals?

The Victorian Government said that projects like this are playing a key role in achieving the state's energy storage targets of at least 2.6GW of energy storage capacity by 2030 and at least 6.3GW by 2035.
