# What is the price of electricity generated by photovoltaic panels

#### **Overview**

The cost per watt of solar panels is the price of generating 1 watt of electricity using solar panels: \$3-\$5 per watt for residential and \$2-\$4 for commercial. How much does solar power cost?

The weighted average wholesale price for solar PV-generated electricity was \$83 per megawatthour (MWh) in 2019, more than double the price paid to producers for electricity generated by wind, fossil fuels, or nuclear. The higher average wholesale price for solar PV relative to other technologies is partly driven by geography and timing.

How much does a PV system cost?

Meanwhile, the costs of manufacturing PV panels have dropped dramatically, with the cost of the commercial PV modules declining from 1.7 USD/W in 2011 to 0.2 USD/W in 2020 . In some countries, PV have even become the cheapest option for new electricity production plants .

How much does solar PV cost in California?

About one-third of all U.S. solar PV capacity is located in California, where the average wholesale electricity price across all technologies was \$74/MWh in 2019, more than double the national average of \$36/MWh. The weighted average wholesale solar PV price in California was \$100/MWh, or more than 20% higher than the national average for solar PV.

Are photovoltaics cheaper than conventional electricity?

The price of photovoltaics (PV) has been steadily decreasing over the last decade, and many reports suggest that PV has become considerably cheaper than conventional electricity sources. In this paper, we critically evaluate the PV grid parity and use China as a case study.

Why are solar PV prices so high?

The higher average wholesale price for solar PV relative to other technologies

is partly driven by geography and timing. Wholesale electricity prices are the prices that electricity retailers, such as utilities, pay electricity producers, such as power plant owners and operators.

Is PV cheaper than fossil fuels?

The global weighted average levelized cost of electricity (LCOE) for PV is now 29% lower than the cheapest fossil fuel alternative. EY said in its latest energy and resources report that 86%, or 187 GW, of newly commissioned renewable energy resources generated electricity at a cost lower than the average cost of fossil fuel generation in 2022.
